

DOES YOUR CHILD STRUGGLE

with reading or schoolwork?

1 in 4 children struggle with reading and learning
because of undiagnosed eye teaming and tracking problems

It is estimated that **over 60% of children and adolescents that struggle with reading** have undiagnosed binocular vision disorders.

The majority of these vision problems are very treatable utilizing Vision Therapy.

UNDERSTANDING COMMON SYMPTOMS:

- | | |
|--|---|
| <ul style="list-style-type: none">• Dislikes reading• Headaches or eye strain• Skips or rereads lines• Short attention span for visual tasks• Poor handwriting | <ul style="list-style-type: none">• Difficulties with comprehension• Trouble focusing on schoolwork• Avoids close-up tasks• Number/letter reversals such as “b” and “d”• Homework takes longer than it should |

What is Vision Therapy?

A doctor directed, individualized program that strengthens the visual skills for learning and daily activities.

Vision is more than 20/20 — it's how the brain uses the eyes together.

Stronger Visual Skills = Better Learning, Reading + Confidence

Ask us if vision therapy could help your child.
